Floralipid – Moringa Oil

Natural and Organic are still the trends for today's skincare and cosmetic products. Most of the high quality vegetable oils are used as emollient but these natural lipid-based emollients are not stable. However, this instability in products can be overcome by adding the anti oxidants into the formula to improve the stability. Here, Floratech had produced the products called Floralipid – Moringa Oil. Picture shown beside are Moringa Seeds and Moringa Tree respectively.

Product Introduction

Floralipid – Moringa Oil

The oil from Moringa Oleifera (INCI: Moringa Oleifera Seed Oil) was used by the ancient Egyptians as a potent cure for skin disorders. Moringa Oil is rich in essential fatty acids, making it an ideal moisturizer and healing and soothing emollient for rough, dry skin and therapeutic massages. In Africa, Moringa is also referred to as “Nebeday”, meaning “the tree that never dies”.

Moringa oleifera is cultivated for its leaves, fruits, and roots for a variety of food and medicinal purposes. The young fruits (sometimes called "drumsticks") can be cooked in a number of different ways.

Moringa Oil is extracted from the Moringa Seed Kernels by cold process. It is the most stable natural oil and it is found to be a good source of a Behenic acid in nature. The oil produced is pale yellow in color, non-drying with a mild, characteristic nutty flavor.

Perfume manufacturers esteem the oil for its great power of absorbing and retaining even the most fugitive odors and for its stability.

The fatty acid composition is considered to be similar to that for olive. The oil is light and spreads easily on the skin making it good for massage or as carrier oil for aromatherapy. Use moringa oil in creams, lotions, balms, scrubs, body oils, and hair care formulations.

Properties:

Moringa oil brings occlusive, “cushiony” emolliency to hair and skin formulas. The presence of behenyl acid provides a much-sought rich emolliency without a greasy after-feel. At room temperature, Moringa oil is nearly clear, odorless, and colourless. Floralipids Moringa Oil is 100% cold pressed from the seeds of the Moringa Oleifera tree.

Moringa Oils improves oxidative stability, provide long lasting moisturization, skin softening, skin soothing, and give silky texture.

Functions/Claims

 Emollient

 High Slip

 Low Spread

 Occlusive

 Lipophilic

Application & Guided Formulation

We could provide a wide range of formulas using Floralipid Moringa Oil and some are stated below:

 Moisturizing Moringa Lipstick

 Moringa Hair Wax

 Moringa Hand and Body Lotion

 Moringa/Jojoba Body Butter

Moringa Massage Oil

Soothing Bronze Moisturizer

Tinted Moringa 24 Hour Moisturizer

Orthobeads

Orthobeads are hard, smooth, botanical microspheres derived from Hydrogenated Camelina Sativa Seed Oil (and) Copernicia Cerifera (Carnauba) Wax (and) Jojoba Esters. It provide gentle and effective exfoliation to the skin and provide formulators the consistent quality, pigment dispersion and diverse colour selection found in all other Floratech cosmetic particles as well. Orthobeads are the ideal particle choice for cost sensitive formulations in skincare, personal care, toiletries and other mass market product categories. Orthobeads are available in all Floratech standard colors and in a particle size range of 100 to 1000 microns.

FLORATECH SPECIALTY PARTICLES STANDARD COLORS

Figure above show the standard colours of Floratech Specialty Particles

Functions/Claims

Effective Exfoliation

Visual Appeal

Emollient Deposition

Botanical origin

Spherical shape and Gentle exfoliation

Application & Guided Formulation

We could provide a wide range of formulas using Orthobeads and some are stated below:

Bar soaps

Body Polishers

Colour Cosmetics

Creams & Lotions

Facial Scrubs

Shower Gels

Liquis hand wash

Spa-themed Therapy Washes

Massage Products
