

Bulletin 4

PHYLDERM VEGETAL C

Introduction

All living things have cell which will grow, reproduce and also breathe. Usually these functions are measured by its oxygen consumption.

These days our environment is suffering from a great deal of pollution and effects from the depleting ozone layer. This results in a decrease in cell metabolic potential in our bodies which will lead to premature aging and even cellular death.

However with proper cellular respiration, our cells can increase its energy reserves which then can enable our cells to fight against these environmental stresses.

Phyltherm Vegetal C is obtained by gentle hydrolysis of soy proteins and it is able to perform 2 levels of activity:

-In the short term, it brings to the skin essential nutrients for renewal

-In long term, it improves cellular metabolism.

Properties

The starting point of all plant life cycle comes from seeds and they contain all the important components necessary for the development of living tissue. Some of these components include biostimulines, essential amino acids, trace elements, etc...

Among all the seeds, soybeans are known to have high concentrations and guaranteed reproducibility of their proteins.

Unlike other generic 'hydrolysed soy protein', Phylderm Vegetal C contains a balanced composition of peptides, amino acids and mineral salts.

Peptides – They induce a revitalization of the cutaneous metabolism and insure long term rejuvenation of the cell's vital functions. Phylderm Vegetal C is obtained by specific reproducible extraction process allowing the selection of a high fraction of peptides whose molecular weight ranges from 1000 to 10000 Daltons. Its biostimulines, characterized by their ability to boost vital cellular functions are peptidic and heteropeptidic fractions that fit into this molecular range (5000 to 10000 Daltons).

Amino Acids – Phylderm Vegetal C contains many essential amino acids which are not synthesized by the organism. They will provide the skin with essential nutrients for maintaining biological balance. Amino acids are involved in synthesis of important proteins such as collagen, elastin and keratin

Mineral Salts – They are catalysts of cutaneous biological reactions and play an important part in maintaining the epidermal surface moisture.

**To preserve the original quality of the soybean, Phylderm Vegetal C are derived from exclusive sources that guarantee their plants are free from genetic engineering.*

Function/Claims

Provides essential nourishment for skin renewal

Improves cellular metabolism over long term

Helps cells oxygenate itself

Helps cells preserve its own energy reserves

Helps preserve metabolic abilities of cells

Increases oxygen consumption of the skin cells by more than 30%

Can be easily substituted for placenta extracts. In fact, the activity of Phylterm Vegetal C is found to be 3 times greater than that of placenta extracts in a substantiation study done.

Application

Phylterm Vegetal C is used in cosmetic and dermatological skin care for :

Nourishing properties for all skin types

Rejuvenating and revitalizing lines for tired, damaged or fragile skin

Treatment and conditioning hair care lines.

Hair care emulsions

Hair care microemulsions

Hair care tonic

Hair care shampoos

Hair care lotions

Hair care gels

Skin care emulsions

Skin care microemulsions

Skin care tonic

Skin care lotions

Skin care gels

Formulations

- ✿ Hair Loss Treatment Lotion (MM6309)
- ✿ Multi-Oxygen Source Cream (MM5709/B)
- ✿ Hair Loss Prevention Microemulsion
- ✿ Hair Loss Prevention Shampoo (CA/SH/HL/001/06)
- ✿ Anti-Hair Loss Tonic (CA/HL/HT/002/06)
- ✿ Hair Loss Prevention Hair Conditioner (CA/HC/HL/001/06)
- ✿ Intensive Hair Mask (CA/HM/001/06)
- ✿ Scalp Mask
- ✿ Hair Mousse
- ✿ Hair Growth Tonic Microemulsion (JB 1556/C)
- ✿ Revitalising Shampoo JB 1755/A
- ✿ Intensive Mask for damaged hair (MM 8062/A)
- ✿ Body Emulsion (JB 0499/B)
- ✿ W/O Strengthening Mascara MM 6815
